Retail integration

"Sustainability Statement

Retail Integration recognise that climate change remains one of the single greatest environmental and social challenges that we face as a species and we will actively seek to be part of the global response that is needed."

Recognition

We are committed to doing everything possible to expand human potential. We do this by developing sustainable software solutions, by building a creative and diverse team and by making a positive impact in communities where we live and work.

Acknowledgement

Retail Integration takes the approach that sustainability is a process that integrates environmental, social and economic considerations into decision making with the goal of creating a thriving and healthy society. Our focus is on improving the quality of life for all citizens without increasing the use of natural resources beyond the capacity of the environment to supply them indefinitely.

Responsibility

Our contributions to the sustainability process starts with how we create and build sustainability into our software development process by creating software solutions that offer a paperless approach i.e. emailed receipts, reports, online ticketing, QR codes etc. Our creative approach to knowledge sharing and management via internal training and workshops ensures we are actively improving both the initial development and maintenance process.

Commitment

We are committed to developing and supplying innovative software solutions that remain highly efficient throughout their service life and support a sustainable energy supply. We will actively invest in paths of opportunity through education, training and employment. We are proud members of Guaranteed Irish and as members, we take pride in having a sense of purpose and making a positive contribution to our economy, society and our environment.
